Summary

Data Engineer with 2+ years of commercial experience building modern data platforms and pipelines for enterprise clients. Strong background in SQL, Python, dbt, Airflow, and cloud data warehouses. Previously worked as a freelance software engineer (2018–2025), building backend systems, APIs, and data extraction solutions across multiple domains. Currently transitioning into full-time data engineering roles focused on scalable data pipelines, scraping systems, and data infrastructure.

Experience

Data Engineer Consultant – Lortech Solutions 08/2024–Present

- Delivered data platforms across 6+ client projects in finance, SaaS and retail industries
- Designed and implemented data warehouse architectures and ELT pipelines using Snowflake, BigQuery, dbt, Airflow, Dagster and Python
- Built and maintained 1000+ dbt models and 100+ orchestration DAGs processing multi-terabyte (up to ~1 TB/day) datasets
- Integrated external APIs (e.g. Salesforce, Outlook) and internal systems into centralized data warehouses through Airflow-based ingestion pipelines using REST and related protocols
- Reduced infrastructure costs up to 30% and improved reliability via testing, monitoring and query optimization
- Led technical decisions, performance tuning, and observability in owned data products

Freelance Software Engineer – Self-employed 11/2018–04/2025

- Delivered fullstack, backend and data-driven solutions for clients across Poland, Eastern Europe, US and UK
- Built web applications, APIs and SaaS products using Python, TypeScript and modern frameworks
- Designed and implemented web scraping and data extraction workflows, including API reverse engineering and browser automation
- Developed automation tools and backend systems handling real-world integrations and external data sources
- Worked across domains including Web3, financial applications and SaaS platforms
- Key projects included:
 - **Momentum** – EdTech platform for automated test evaluation using AI (scanning, extraction, grading)
 - **TonStars** – Telegram-based Web3 game with real-time scoring and user interaction systems
 - **Solana Web3 Game (NDA)** – Real-time trading simulation game with event-driven backend

- **Replicate Models Scraper** – Full dataset extraction from replicate.com in absence of a public API
- **Cryptonary** – Crypto forecasting tool using time series models (Facebook Prophet) for market trend prediction

Python Developer – Decision Sciences Company (remote)

11/2022–05/2023

- Developed Python-based data workflows, automation scripts, and API integrations for production systems

Projects

moneysense-data – GitHub

- Event-driven data platform with Kafka-compatible streaming, cold archive (Parquet + object storage), and ClickHouse analytics
- Designed scalable ingestion, partitioning, and low-latency querying for historical backtesting workloads
- Docker-based local production environment

Dealscan – Automotive data scraping system

- Built a multi-source web scraping pipeline for aggregating car listings from platforms like otomoto.pl and mobile.de
- Implemented data extraction, normalization and deduplication across heterogeneous sources
- Designed scraping strategies combining API reverse engineering and HTML parsing

Waitset – SaaS platform (waitset.com)

- Designed and built the entire product end-to-end, including frontend, backend and system architecture
- Developed core product features, integrations and data flows across services
- Worked on product strategy, go-to-market and overall system design

vvvv – Network traffic analysis tool in browser (live — GitHub)

- Built a browser-based network inspection tool inspired by Wireshark
- Implemented low-level request/response inspection and visualization
- Focused on networking concepts, debugging and traffic analysis

Publications

- **Hodana, J.** “Data Warehouse Cost Attribution” (2026)
- **Hodana, J.** “The Hidden Cost of Wide Tables in Snowflake” (2025)
- **Hodana, J.** “Automating Salesforce → dbt Models” (2024)
- **Hodana, J.** “Efficient Google Places Storage using Golang” (2024)

Skills

SQL, Python, Go, TypeScript, dbt, Apache Airflow, Snowflake, BigQuery, PostgreSQL, Amazon Web Services (AWS), Google Cloud Platform (GCP), Docker, Git, CI/CD, Spark, ELT/ETL, Data Modeling, Testing, Monitoring

Education

Polish-Japanese Academy of Information Technology (PJATK)

B.Eng. Computer Science

2024–2028

Certifications

SnowPro Core (Snowflake)

08/2025–08/2027

Credential ID: 156908869

dbt Developer (dbt Labs)

02/2025–02/2027

Credential ID: 135541190
