Summary

Fullstack Software Engineer with 7+ years of experience building and shipping production-grade web applications end-to-end.

Strong background in both backend and frontend development, with a focus on building scalable APIs, performant user interfaces, and complete products from idea to production. Experienced in working on real-world systems with users, revenue, and continuous iteration.

Comfortable owning the full development lifecycle — from system design and architecture to implementation, deployment, and optimization.

Experience

Fullstack Software Engineer – Lortech Solutions

08/2024–Present

- Built and maintained fullstack web applications, backend services, and APIs across multiple client projects
- Designed and implemented end-to-end systems (frontend + backend + integrations + deployment)
- Developed scalable backend services in Python and TypeScript, including API design and data modeling
- Built modern frontend interfaces using React/Next.js with focus on UX, performance, and maintainability
- Integrated external services (APIs, third-party tools) and built robust, fault-tolerant systems
- Worked across the full stack: architecture, implementation, debugging, and production support
- Improved system performance and reliability through profiling, refactoring, and optimization

Freelance Fullstack Developer

2021–Present

- Built and shipped multiple web applications and SaaS products end-to-end for clients and own projects
- Delivered complete systems: backend, frontend, infrastructure, and deployment
- Worked directly with users and stakeholders, iterating on product features and UX
- Focused on fast iteration, real-world usability, and production reliability

Python Developer – Decision Sciences Company (remote)

11/2022–05/2023

- Developed backend components, APIs, and integrations in Python for production systems
 - Worked with existing codebases, improving maintainability, performance, and correctness
-

Projects

Waitset – waitset.com

- Built a production SaaS product with real users and recurring revenue (MRR)
- Designed and implemented the system end-to-end (frontend, backend, infrastructure)
- Developed user-facing features, authentication, and domain management
- Focused on performance, reliability, and continuous product iteration

Devhub – Live

- Built a platform for developers featuring real-time collaboration and project sharing
- Implemented fullstack architecture using modern web technologies
- Focused on UX, interactivity, and scalability

moneySense-data – GitHub

- Designed and implemented a backend-heavy system for data processing and analytics
- Focused on system design, performance, and efficient data handling

Skills

Python, TypeScript, JavaScript,
 React, Next.js, Node.js,
 FastAPI, REST APIs, backend architecture,
 PostgreSQL, SQL,
 Docker, AWS, GCP, CI/CD, Git,
 System design, fullstack development, product development

Education

Polish-Japanese Academy of Information Technology (PJATK)	
B.Eng. Computer Science	2024–2028

Certifications

SnowPro Core (Snowflake)	08/2025–08/2027
Credential ID: 156908869	
dbt Developer (dbt Labs)	02/2025–02/2027
Credential ID: 135541190
