Summary

Python Software Engineer with 7+ years of experience building production-grade backend systems, APIs, and developer tooling.

Strong expertise in designing modular, testable architectures and working with complex Python codebases in production. Deep understanding of Python internals, asynchronous programming, and performance optimization.

Experienced in building full-featured systems end-to-end (design → implementation → deployment), with a focus on reliability, maintainability, and clean system design.

Experience

Python Software Engineer (Backend & Systems) – Lortech Solutions 08/2024–Present

- Built and maintained production-grade Python services, APIs, and internal tools across multiple client projects
- Designed modular, scalable architectures with clear separation of concerns and strong emphasis on testability
- Developed full-stack web applications end-to-end (backend services, APIs, integrations, deployment)
- Applied advanced Python features including async/await, generators, decorators, and context managers in production systems
- Worked extensively with asynchronous processing, background jobs, and task orchestration
- Optimized performance of production systems through profiling, memory improvements, and query optimization
- Integrated external APIs and built robust, fault-tolerant service pipelines
- Led technical decisions around system design, reliability, and observability

Python Developer – Decision Sciences Company (remote) 11/2022–05/2023

- Developed backend components, APIs, and automation workflows in Python for production systems
 - Worked with complex codebases, focusing on correctness, maintainability, and performance
 - Built integrations with external services and internal tools used in production environments
-

Projects

moneysense-data – GitHub

- Designed and implemented a production-grade data and analytics system with event-driven ingestion and scalable storage
- Built ingestion pipelines, partitioning strategies, and efficient querying mechanisms for large datasets

- Focused on system design trade-offs, performance optimization, and efficient data access patterns
- Created a reproducible local environment using Docker for development and testing

Publications

- **Hodana, J.** “The Hidden Cost of Wide Tables in Snowflake” (2025)
- **Hodana, J.** “Automating Salesforce → dbt Models: Dynamic Metadata-Driven Modeling” (2024)
- **Hodana, J.** “Efficient Google Places Storage using Golang” (2024)

Skills

Python (advanced: async/await, generators, decorators, context managers, performance tuning), FastAPI, Pydantic, REST APIs, Backend Architecture, SQL, PostgreSQL, Docker, AWS, GCP, CI/CD, Git, Testing (unit/integration), modular design, system design

Education

Polish-Japanese Academy of Information Technology (PJATK)
B.Eng. Computer Science

2024–2028

Certifications

SnowPro Core (Snowflake)
Credential ID: 156908869

08/2025–08/2027

dbt Developer (dbt Labs)
Credential ID: 135541190

02/2025–02/2027
